

Objective Structured Clinical Examination (OSCE)

The Department of Physiology conducted an Objective Structured Clinical Examination (OSCE) for First MBBS students in alignment with the NMC's CBME framework. The assessment evaluated clinical examination skills for the Cardiovascular, Respiratory, and Nervous systems through structured OSCE stations.

Following the practical assessment, objective tests were conducted to reinforce learning and ensure a comprehensive evaluation. This blended approach enabled assessment of both hands-on skills and theoretical knowledge, promoting integration of pre-clinical concepts with clinical application.

Students participated actively and received constructive feedback, making the session educational, interactive, and engaging.
